DETAILED ACTION

Reasons for Allowance

1. Claims 1-3, 6-19, 22-35, and 37-40 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Independent claims 1, 9, 14, 17, 25, 30, 33, 38, and 40 have been carefully considered. Prior art of record fails to teach the combination of claimed elements including a method for customizing a web-based graphical user interface wherein a plurality of screens that are not web-based are generated; the web-based graphical user interface is customized using a first customization format based on the plurality of screens; and in response to an event during customization, automatically switching from the first customization format to a second customization format.

Hitchcock et al (US 6,345,278 B1) discloses a method for processing customizable application forms that share information from a database. Hitchcock teaches a third party servicer that provides customized forms for a plurality of institutions, and data is shared between the customized applications. Information that has previously been entered in prior applications is automatically inserted into the customized form. Hitchcock fails to teach or suggest that the graphical user interface is customized based on a plurality of non web-based screens and that the system automatically switches from a first customization format to a second

customization format in response to a given event.

Haverstock et al (US 6,678,738 B2) discloses a system for enabling access to non-HTML objects from a web browser. A server locates and retrieves the document requested; a module translates the document to a format supported by the web browser; the server communicates the translated object to the web browser. The system also enables non-HTML documents to be embedded within web pages; non-HTML documents are translated into HTML documents and provides the non-HTML document in a format supported by a browser. Haverstock fails to teach or suggest that the user interface is customized based on a plurality of non web-based screens and that responsive to an event during customization, the system automatically switches from a first customization format to a second customization format.

Bloomfield et al (US 2003/0063119 A1) discloses a method for displaying the output of executing application programs in a web page. Bloomfield teaches that the system enables display of application-output data within application-output windows embedded in a web browser window, which can be manipulated within the web browser window even when the application program providing the source of the application-output data is non-web enabled (legacy applications). Bloomfield fails to teach or suggest a user interface being customized based on a plurality of non web-

based screens and that responsive to an event during customization, the system automatically switches from a first customization format to a second customization format.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
